

PrepGenie — Project Pitch Deck

Slide 1: Title

PrepGenie *Your AI Career-Prep Copilot* Built by [Your Name] — B.Tech IT

Slide 2: Problem

- Every placement season, thousands of students submit resumes with no idea if they're ATS-compatible.
 - Most students walk into their first real interview without ever having practiced one.
 - Career guidance and mentorship are scarce, expensive, or inconsistent.
 - **Result:** talented students lose opportunities not because they lack skill, but because they lack preparation and feedback.
-

Slide 3: Target Users

Persona	Pain Point
Pre-final year student	"Is my resume even good enough to get shortlisted?"
Final year student	"I've never done a real interview before — I don't know what to expect."
Non-CS / core branch student	"I don't know which skills recruiters actually expect from me."

Slide 4: Solution

PrepGenie combines **AI resume analysis** and **AI mock interviews** into one platform:

1. Upload your resume → get an instant ATS score + section-by-section feedback.
2. Pick your target role → practice a realistic mock interview with AI.
3. Track your improvement over time on a personal dashboard.

"A mentor in your pocket, available 24/7."

Slide 5: Key Features

- 📄 **AI Resume Analyzer** — ATS score, keyword gaps, section-wise suggestions
 - 🎙️ **AI Mock Interview Coach** — role-specific, resume-aware questions with scoring
 - 📊 **Progress Dashboard** — score history, weak topics, streak tracker
 - 🔒 **Secure Auth** — Google/email login via Supabase
 - 📱 **Fully Responsive** — usable on mobile between classes
-

Slide 6: Technical Approach

- **Frontend:** React + Tailwind + shadcn/ui + recharts for data visualization
- **Backend:** Node.js/Express API layer, keeping all AI keys server-side and secure
- **AI Layer:** Claude API with strict JSON-schema-enforced prompts for reliable, structured output
- **Database:** PostgreSQL (Supabase) for users, resumes, interview sessions, and progress snapshots
- **Deployment:** Vercel (frontend) + Render (backend) + Supabase (DB/Auth/Storage) — fully free-tier for v1

Architecture Flow:

```
User → React Frontend → Express API → Claude API (analysis/scoring)
                                   → Supabase (auth/storage/DB)
```

Slide 7: What Makes This Technically Impressive

- Structured prompt engineering (enforcing JSON schemas from an LLM reliably)
- Full auth + file upload + parsing pipeline (PDF/DOCX)
- Multi-turn conversational state management for mock interviews
- Real data visualization (charts) driven by AI-generated scores
- Production deployment across 3 services with proper secret management

Slide 8: Future Scope (v2 Roadmap)

- 🧑‍🎓 Video-based interview practice with basic body-language/eye-contact feedback
- 🌐 Multi-language support for regional-language resumes
- ✂️ Job description matching — paste a JD, get a tailored resume + question set
- 🍌 Peer mock-interview mode (student-to-student practice with AI as moderator)
- 📁 College/placement-cell dashboard for tracking cohort-wide readiness
- 🇲🇻 Optional premium tier: unlimited interviews, downloadable reports, resume rewriting assistant

Slide 9: Vision

PrepGenie's long-term vision is to become the default AI prep companion for every student entering the job market — democratizing access to the kind of resume and interview coaching that today only a lucky few get from mentors, seniors, or paid coaching centers.

"Every student deserves a mentor. PrepGenie is that mentor, available anytime, for free."

Slide 10: Call to Action

-  Live Demo: [\[your-deployed-link\]](#)
-  GitHub: [\[your-repo-link\]](#)
-  Demo Video: [\[your-loom-link\]](#)
-  Open to feedback, contributions, and internship opportunities!
